Annual Celebration

Celebrating 7 years of vDoIT it's all about our employees, our customers and partners – people who made company's success possible. We are very grateful to all employees for their dedication and patience, for delivering quality to our customers and for making vDoIT a joint family. Moreover, it is a great pleasure to cooperate with all of our stakeholders. Due to their confidence and trust, vDoIT is being recognized in the market as one of the most recognised agile organization of the world which believes in constant innovation and value addition.

When vDoIT was founded back in 2015, we were a small team in a challenging business environment, but with a well-defined vision, confident and eager to grow. After 7 years of hard work, we remained just as ambitious as we started, however we gained more experience, strengthened our skills and our collaborations.

Interview of the Month

WHICH PROGRAMMING LANGUAGE DO YOU THINK IS THE BEST FOR BACK-END DEVELOPMENT?

I have worked with different backend languages like c, c++, c#, node.js, and PHP. Every language has its advantages and disadvantages. I found PHP to be very easy to learn, however currently node.js is in demand.

WHAT ARE THE QUALITIES ANY GOOD BACKEND DEVELOPER MUST POSSESS?

Being a developer one must be cool-minded and need to think out of the box. Every day there is a new challenge that a developer has to achieve and one must never feel discouraged if code has bugs as one can never learn without failing. Moreover, every developer should have the zeal to learn to sustain in the IT industry as technology is updating every day and competition is very hard.

WHAT DO YOU FIND HARDEST ABOUT CODING?

I feel coding is fun and you will not find anything hard if you enjoy doing it.

WHAT IS YOUR APPROACH TO DEBUGGING?

I always try to check the flow of code at first. Once I know the flow of code I try to debug the code by debug bar or by adding a simple `dd()` method to check if the data is coming as per requirement.

IF YOU HAVE TO DELIVER NEGATIVE FEEDBACK TO MEMBERS OF YOUR DEVELOPMENT TEAM, HOW WOULD YOU DO IT?

In development either you attain 100% or 0. If the code does not work as expected the client will never come back to our company. So delivering the right feedback to the developer is a must. If you are a good developer then you must be able to handle criticism. I generally tell truth to the face and I don't feel any issues while letting know my team how's the code, is if it's good then it will increase the confidence of the developer and if its not good then it will help the developer to improve.

TELL US ABOUT A TIME WHEN YOU RECEIVED CRITICISM ABOUT YOUR WORK AND HOW YOU HANDLED IT.

Criticism is the best way to improve yourself. If you can handle criticism then nobody can stop you to succeed in your life. I take criticism as a boon to my career. Only because of this I have become independent and more responsible towards coding. Some people quit their path because of criticism but that's not why you choose this career, to quit. Right?
